ELEKTRO LUBE

Characteristics

Elektro lube is a concentrated formulation for protection of all types of electronics, electric motors, electronic controls and computer systems. Elektro lube has been developed to function smoothly under the most extreme situations and is safe for all metals and almost all plastics. Elektro lube has a good penetrating effect and guarantees good lubrication and protection of your application. This product immediately dissipates moisture and forms a very high-quality, water-repellent and flexible protective layer. This protective layer not only expels moisture that penetrates from the outside, but also protects electronic control systems from condensation. This guarantees a good business return.

Application

Elektro lube is excellent for lubricating, for example, parts of operating devices such as relays, switches and plugs. In the garage world, Elektro lube is irreplaceable for the protection of electronic ignition systems, on-board computers, battery terminals, spark plug cables, plug connections, power distributors, rotors, contact points, spark plugs, sensors and hydraulically protected valves.

Properties

- Prevents corrosion
- Protects against condensation
- Flexible, moist repellant coating
- Safe for all metals and most plastics
- Excellent penetration
